

RealEstate.Web

User manual

This guide describes the main modules in the application: Dashboard, Master data, Registration, Accounts, Accounts reports, operational Reports, and Settings. Menu items appear only when your user role has the matching permission (for example *dashboard.view*, *master.view*, *accounts.edit*, etc.).

Document version

2026-04-21 (generated)

1. Sign in

Open the login page and sign in with the account your administrator created. Passwords must meet complexity rules (length, upper/lower case, digit, symbol). After too many failed attempts the account may lock temporarily.

Most of the application requires authentication. If you see Access denied, your role does not include the required permission.

2. Dashboard

Open Dashboard → Overview if you have dashboard.view. The overview shows month-to-date receipt totals, occupancy, active tenant contracts, and shortcuts into Receipt vouchers and related KPIs. Use it as your daily landing page.

3. Master data

Company: Master → Company Profile shows your organization. With master.edit you can open Edit company to update legal name, trade permit dates, logo, and other profile fields. If trade permit validation fails, the menu may narrow until company data is corrected.

Buildings: Master → Buildings — create buildings and units. Assign cash and bank ledgers where the form requires them; those ledgers cannot be deleted while still linked to a building.

Landlords & Tenants: Master → Landlords and Master → Tenants maintain party master records (codes, contacts, linked receivable/payable ledgers).

Ledgers: Master → Ledgers lists the chart: codes, groups (e.g. Accounts Receivable / Payable), opening balance, and current balance from posted lines. You can create standalone ledgers with master.edit. System ledgers cannot be deleted. A ledger also cannot be deleted if it is linked to a tenant, landlord, building, maintenance contract, or has any journal lines (including opening balance vouchers).

4. Registration

Registration → Tenant Registration, Landlord Registration, and Maintenance Contract capture formal agreements: units, terms, rent, deposits, commissions, and fee schedules. Complete registration before relying on receipts, PDC tracking, and contract-based reports.

Maintenance contracts may reference agent commission ledgers, registration fee ledgers, security deposit ledgers, and payment cash/bank ledgers — those links block ledger deletion until changed.

5. Accounts (vouchers)

Accounts → Receipt Voucher records money received (e.g. rent collections). Payment Voucher records money paid out. Journal Voucher posts adjustments and transfers between ledgers. Typical flow: receipt vouchers for collections, payment vouchers for payouts, journal vouchers for corrections and accruals. Permissions use `accounts.view` / `accounts.edit`.

6. Accounts reports

Accounts Report → PDC Payable and PDC Receivable track post-dated cheques payable and receivable. Ledger Statement produces activity for a selected ledger over a period. Use `accountsreport.view` (and edit where applicable).

7. Operational reports

Under Reports: Contract Expiry, Security Deposit, Registration Fees, and Commission — each often has Tenant, Landlord, and Maintenance variants. Use these for renewals, deposit follow-up, fee analysis, and commission review. Requires reports.view.

8. Settings (administration)

Settings → User Management: create users and assign roles (settings.users.*). Settings → Roles & Permissions: configure which modules each role can view, edit, or delete (settings.roles.*). Settings → System Settings: application-wide options where deployed (settings.system.*).

9. Software license

Some deployments enforce software activation or license validation. If the system shows license or activation messages, follow the on-screen instructions and ensure company-level license fields are set by an administrator. Health checks may report license status in hosted environments.

Suggested first-time order

1) Configure company profile. 2) Confirm ledgers (system + any standalone). 3) Add buildings. 4) Add landlords and tenants in Master or complete Registration flows. 5) Post vouchers as operations occur. 6) Use Accounts reports and Reports for control and renewals.
